FEEDBACK FROM BILATERAL JRC - FRANCE

© IGN

Marie Lambois

Modèle TN-02.018-2.0

SPP/20.0299

EARLY 2020 SITUATION

- 📍 43 000 metadata
- 📍 93738 errors
- 📍 Number of valid metadata changing from one harvest to the other without any change on our side
- 📍 Number of downloadable data lower than what we have in national portal

BILATERAL MEETING OUTCOMES

1. Downloadable dataset through WFS service, not recognized as downloadable
1. Downloadable and viewable dataset, using data-service linking simplification (as discussed in the INSPIRE Geoportal workshop, beginning of 2019)
1. Summary table export from the harvesting console

ADVICE 1: DO NOT RELY ON THUMBS

📍 In the linkage checker

📍 Thumbs were up, but there is still a red square

📍 **Data is seen as not downloadable**

Main linkage aspects

Linkage Aspect	Result
Data Set metadata contains Unique Resource Identifier	☑
Data Set metadata contains INSPIRE Spatial Data Theme	☑
The View Service has been contacted	☑
Linkage has been established between the View Service and Data Set	☑
The Download Service has been contacted	☑
Linkage has been established between the Download Service and Data Set	☑
A Download link has been determined ?	☐

Linkage aspects related to the INSPIRE Geoportal

Linkage Aspect	Result
Data Set metadata exists in the INSPIRE Geoportal	☑
View Service metadata exists in the INSPIRE Geoportal	☑
Download Service metadata exists in the INSPIRE Geoportal	☑

ADVICE 2: ANSWER FASTLY

📍 Response speed to the GetCapabilities request

📍 Must be received within 30s

📍 Can explain changes in downloadable indicator

8.2 Performance

8.2.1 Implementation requirements mandated by the Implementing Rule

"For the Get Download Service Metadata operation, the response time for sending the initial response shall be maximum 10 seconds in normal situation.

For the Get Spatial Data Set operation and for the Get Spatial Object operation, and for a query consisting exclusively of a bounding box, the response time for sending the initial response shall be maximum 30 seconds in normal situation then, and still in normal situation, the download service shall maintain a sustained response greater than 0,5 Megabytes per second or greater than 500 Spatial Objects per second.

For the Describe Spatial Data Set operation and for the Describe Spatial Object Type operation, the response time for sending the initial response shall be maximum 10 seconds in normal situation then, and still in normal situation, the download service shall maintain a sustained response greater than 0,5 Megabytes per second or greater than 500 descriptions of Spatial Objects per second.

[...]

The normal situation represents periods out of peak load. It is set at 90 % of the time."

JRC investigating how it could be advertised

ADVICE 3: CHECK EVERY DETAIL

📍 The issue in our test metadata was that URL inside the GetCapabilities was wrong.

📍 Operation ListStoredqueries need to be available

```
GET https://inpn-inspire.mnhn.fr/geoservices/ows?request=GetCapabilities&service=WFS&AcceptVersions=2.0.0

European Commission

📍 The bulk download script (available as open source project on GitHub at <https://github.com/inspire-eu-validation/monitoring-bulk-validation-tool>) is producing various files as output. One of them is a CSV file listing the validation errors for all metadata (both for MD TG 1.3 and 2.0).

ONE IS GOOD, ONLY 43370 LEFT

Main linkage aspects

Linkage Aspect	Result
Data Set metadata contains Unique Resource Identifier	✓
Data Set metadata contains INSPIRE Spatial Data Theme	✓
The View Service has been contacted	✓
Linkage has been established between the View Service and Data Set	✓
The Download Service has been contacted	✓
Linkage has been established between the Download Service and Data Set	✓
A Download link has been determined	✓

Linkage aspects related to the INSPIRE Geoportal

Linkage Aspect	Result
Data Set metadata exists in the INSPIRE Geoportal	✓
View Service metadata exists in the INSPIRE Geoportal	✓
Download Service metadata exists in the INSPIRE Geoportal	✓
